Confidential product brief ·
26 Jul 2026
Root: C:\NEXOSxLPIN · 1.6.1 · 100 desks

MISSION

NEXOSxLPIN is a verification workbench. It helps operators score claims, attach sources, and build only the scene objects a story actually needs — without treating rumor as fact.

Operating principle

Prefer primary records over posts. Prefer instruments over headlines. If something is only plausible, label it that way. Never launder uncertainty into certainty.

Contents

1. What this product is
2. How to run a desk
3. Score language
4. Claims and verification
5. Story scenes (Forge and Massing)
6. Platform inventory
7. Workspace modes
8. Install and quality gates
9. Key files for rebuild
10. Security notes

1. What this product is

NEXOSxLPIN is not a news feed and not a social dashboard. It is a structured surface for investigation training: load a desk, work the claims, run specialist lenses, and only then export.

Each desk ships with a story brief, map pin, claim ledger, sources, and — when relevant — 3D scene objects derived from those claims (vehicle, path, crowd, docket stack, vessel, debris, and similar). Geometry is illustrative. It is not a forensic reconstruction.

Figure 1. Workbench layout: map, claims, and story scene.

2. How to run a desk

- **Open a desk.** Use the story switcher or click a map pin. Trend desks and 56 congressional training desks are available.
- **Read the brief.** Note stakes, known facts, and open questions before scoring.
- **Score claims.** In Claims, set +1 / 0 / -1. Bind +1 lines to sources. Rebuild sourced claims if the ledger looks empty or generic.
- **Verify.** Run multi-loop verify: structure, sources, scores, duplicates, export readiness.
- **Build the scene.** Open Massing Viewer or Forge. The desk auto-seeds story objects. Use Full scene to see them together.
- **Export only when clean.** Clear open -1 blocks and pass Layer-0 gates before publish pack or code export.

3. Score language

The product uses three scores only. This is intentional. It keeps operators from sliding into soft language that hides risk.

Score	Meaning	Operator action
+1 Supported	Primary or strong secondary material backs the line.	Keep, cite, model as supported.

Score	Meaning	Operator action
0 Not proven	Plausible or incomplete — not ready as fact.	Hold. Model only with an explicit “plausible / unverified” flag.
–1 Disputed	Conflicts with better evidence, or fails a method gate.	Do not treat as fact. May appear as a contested locus in the scene.

Honesty rule

If a claim is believable but has no bound primary source, it may still appear in the scene — only with a clear “plausible / unverified” label. That label is part of the product, not decoration.

4. Claims and verification

The Claims module is the ledger. Each line should be story-specific, sourced, and free of template boilerplate. A multi-loop check runs structure, source binding, score hygiene, near-duplicate removal, and export readiness.

Optional: the Grok research agent builds a verification prompt from the desk context and opens public Grok (or copies the prompt). No API key is stored in the browser.

5. Story scenes (Forge and Massing)

Procedural Forge and Massing Viewer turn claim language into readable 3D stand-ins. The system does not invent a city. It selects objects that the story actually mentions or requires for oversight desks (for example a docket stack and facility massing).

How selection works

- Read claims and evidence for the active desk.
- Match physical or process nouns (vehicle, path, crowd, vessel, debris, records, drone, firebreak, and similar).
- Merge curated story packs when they exist.
- Rank by importance; attach a verifiability flag from the claim score and sources.
- Remove near-duplicates; seed the top objects into Massing.

Mesh families (what you see)

If the story involves...	Scene object
Vehicle / car / truck	Vehicle body (cabin, wheels)
Path / sidewalk / corridor	Path strip with incident pin
Crowd / pedestrians	Crowd cluster
Fire / firebreak	Firebreak line
Ship / boat / port	Vessel hull on water
Debris / quake / rescue	Debris pile
Records / bill / export control	Docket stack on a bench
Drone / UAS	Pad and airframe
Building / venue / foundry	Building massing
Media / broadcast	Media riser
Refuge / muster	Refuge canopy

Massing offers Full scene (all seeded objects side by side) and Solo object (one mesh with flags and reasoning). Claim Status P0 locks Spec colors everywhere they appear today: +1 supported #22c55e, 0 hold #f59e0b, -1 disputed #f43f5e, and plausible / unverified #a78bfa (honesty flag — not a fourth score). Map pins follow highest-stakes claim on the desk. Geometry remains illustrative, never forensic.

6. Platform inventory

Component	Status
Investigation desks	100 total (kept category tops)
Citizen journalism / trends	10 detailed tops retained
Congressional / industry-effect	56 desks retained

Component	Status
Geopolitical (new)	10 detailed desks (SCS, Sahel, Red Sea, Taiwan, Arctic, Balkans, Caucasus, DPRK, minerals, Caribbean)
Topical expansion	23 desks across infrastructure, health, cyber, climate, markets, elections, tech
SME lenses	252 specialized lenses with adjudication rules
Mesh families	105 unique families · multi-select spatial stage
Modules	10 (Information through Export Kit)
Evidence language	+1 / 0 / -1 only · plausible / unverified honesty flag
Claim Status Visual (P0)	Rail + badge + text · Spec colors · map pin highest-stakes
UI Supercharge Spec	docs\NEXOSxLPIN_UI_Supercharge_Spec_v1.0.md (locked)
Imagine visual sequence	docs\NEXOSxLPIN_Imagine_15_Prompt_Sequence.md (reference only)
Product version	1.6.1 · P0 claim status shipped

Story catalogue (topics)

Topic	What it trains
Geopolitical	Maritime, corridors, drills, minerals, migration intercepts — primary hierarchy under fog
Infrastructure	Grid, bridges, ports, rail hazmat
Public health	Zoonosis, hospital cyber, drug shortages
Cyber security	Municipal ransomware, telecom outages, synthetic officials
Climate & extreme	Heat, flood gauges, smoke AQI
Markets & finance	Bank rumors, sanctions shipping, commodity squeezes
Elections process	Ballot cure, pollbooks, AI robocalls
Tech governance	App-store remedies, model evals, biometric bans, open-weights export
Congressional	Industry-effect oversight desks (agency + Congress hierarchy)
Citizen journalism	High-velocity trend desks (Berlin CSD top, plus nine retained tops)

7. Workspace modes

Mode	Use when
Tabs	You want one full-height module at a time.
Tiles	You want several modules visible; drag headers to reorder; drag splitters to resize; maximize any pane.
Immersive	You want a dense HUD-style stage.

8. Install and quality gates

Launch

Desktop shortcut: NEXOSxLPIN.lnk

Or: START.bat in C:\NEXOSxLPIN → <http://127.0.0.1:5173>

Fresh machine: INSTALL.bat (Node LTS, install, build, shortcuts)

Quality gates (must pass)

```
cd /d C:\NEXOSxLPIN
```

```
npm.cmd run test
```

```
npm.cmd run lint
```

```
npm.cmd run build
```

```
node scripts\smoke-sme-congress.mjs
```

Packaging

```
python scripts\build_share_zip.py
```

```
powershell -File scripts\create-desktop-shortcut.ps1
```

```
python scripts\gen_broitshere_pdf.py
```

Ship locations

Artifact	Path
Product root	C:\NEXOSxLPIN
Share zip	releases\NEXOSxLPIN-1.6.1-*.zip
This brief	LocalDesktop\BROITSHERE!.pdf · docs\BROITSHERE!.pdf
Desktop launch	NEXOSxLPIN.lnk → launch-nexos.vbs → START.bat
Imagine refs	docs\NEXOSxLPIN_Imagine_15_Prompt_Sequence.md (no code change)
Shortcut	NEXOSxLPIN.lnk
Corpus seeds	src\data\useCases\corpusSeeds100.json + storyCorpus100.ts

9. Key files for rebuild

Hand this brief and the zip to an engineer or agent. Start with these paths:

Path	Role
src/lib/forge/objectReasoning.ts	Selects and ranks story objects; verifiability flags
src/lib/forge/sceneMeshes.ts	3D mesh families (vehicle, path, crowd, vessel, ...)
src/lib/forge/generators.ts	Asset generation and Unity / Three export
src/components/modules/MassingViewerModule.tsx	Scene and solo 3D view
src/components/modules/ProceduralForgeModule.tsx	Object list, seed, build
src/lib/verify/claimLedger.ts	Sourced claim ledger

Path	Role
src/lib/verify/pipeline.ts	Multi-loop verification
src/store/platformStore.ts	Desk load, seed, workspace state
src/data/useCases/	Stories, desks, sources, simulations

10. Security notes

- No secrets or personal data in sample packs.
- External links are opened only if they pass a safe-URL check.
- Content Security Policy and referrer policy are set in index.html.
- Training desks are not legal advice; scores are operator hygiene, not judicial findings.
- Export actions can be blocked by Layer-0 until acknowledged and –1 lines are resolved.

End of brief. Regenerate with: `python scripts\gen_broitshere_pdf.py`
