

NEXOSxLPIN

Open Ecosystem Development Plan

Experimental public verification workbench — branching civic topics with full transparency, skill citations, visual assistant coherence, 3D illustrative path, and an open iteration model anyone can run.

Version 2.0 · 26 July 2026 · Channel: **EXPERIMENTAL** · Designed for open distribution

America First · Truth-Seeking · Evidence over narrative

Prefer primary records over posts. Prefer instruments over headlines. Never launder uncertainty into certainty.

GitHub: <https://github.com/AdventureNLearn/NEXOSxLPIN> · **Skills:** <https://github.com/AdventureNLearn/AOS-v3---LPIN>

1. Purpose of this document

This plan explains how the full NEXOSxLPIN + LPIN skill stack moves beyond any single first domain into dynamic civic topics while preserving evidence discipline. It is written for **open distribution**: every claim about architecture is traceable to public skill and product surfaces, and every contribution path is explicit.

The stack has two permanent layers: (1) the **skill / governance layer** (LPIN / AOS v3.0) that enforces Evidence / Inference / Assumption separation, Layer-0 gates, and multi-agent orchestration; and (2) the **runnable verification workbench** that turns those rules into desks, claim ledgers, maps, and illustrative 3D scenes. The workbench is deliberately domain-swappable. Version 2.0 adds an **experimental public channel**, a Visual Assistant coach, quieter immersive chrome, and OPSEC durability for public clones.

2. Non-negotiable discipline (must survive every branch)

Any fork or topic adaptation is only valid if these remain intact:

- **Evidence-gated claims** — Statements appear only after primary or strong secondary sources are bound. No invented numbers.
- **Tri-state + honesty flag** — +1 Supported, 0 Not proven, -1 Disputed. No soft intermediate scores.
- **Layer-0 export gates** — High-stakes actions blocked while unresolved -1 claims exist.
- **Progressive disclosure** — Families before desks; Experts closed by default; advanced 3D after verification loops.
- **Explicit export only** — Nothing auto-downloads. Share packs are deliberate operator actions.
- **Illustrative geometry only** — 3D stand-ins from scored claims. Never forensic reconstructions.
- **Experimental honesty** — Channel labels remain visible until maturity is earned.
- **OPSEC / PII** — No secrets, no private personal data in sample packs; high-level selectors until focus is defined.

3. Relevant GitHub skills and how they map

Permanent governance layer: AdventureNLearn/AOS-v3--LPIN. Skills most exercised when the workbench branches into new civic topics:

Skill	Role in branching topics	Typical activation
evidence-gate	Forces +1 / 0 / -1; blocks export on open -1	Every claim score and export path
sovereign-lens	Module-0 routing + narrative integrity	High-stakes or media-adjacent desks
4-agent-orchestration	Structured multi-agent hand-offs	Complex multi-source audits (Deep run planned)
mission-spine-guard	Truth-seeking primacy alignment	All Tier-1 outputs
civic-intelligence-coordinator	Permits, public-records, oversight, jurisdiction	Any civic domain fork
public-records-forensics	Permits, contracts, minutes analysis	Source binding and ledger hygiene
oversight-kit-builder	Evidence bundles for citizen accountability	Share / Export Kit generation
gis-layer	Leaflet/map layers, public spatial data	Map + investigation layers

In-repo abstracts: docs/skills-reference/INDEX.md. LLM adoption: docs/LLM_REASONING_FRAMEWORK.md.

4. Workbench surfaces (v2.0 experimental)

Runnable product: github.com/AdventureNLearn/NEXOSxLPIN · MIT · Node LTS.

Surface	Maturity	Role
First-run picker	Beta	Single clean path before chrome unlocks
Claims ledger	Stable-ish core	Atomic +1 / 0 / -1 board of truth
Map + basemaps	Beta	Public geography; investigation layers
Visual Assistant	Beta	Here / Why / Next coach; coherence spine
Immersive stage	Beta	Claims toggle; Experts off by default; 5 Focus tabs
Experts (252 SME)	Lab	Confirm-apply checklists — not licenses
3D / Massing / Forge	Lab	Illustrative stand-ins; scale-accurate inspect
Share pack	Stable-ish core	Hard-block on open -1; Layer-0 ACK; experimental disclaimer

5. Operator loop (high agency)

Orient → Score → Source → Place → Challenge (-1) → optional Model → Share

If lost: read the Assistant bar and press Go. Experts, Rules, Depth, and Commands stay optional.

6. Branching a new civic topic (fork path)

- Clone the workbench; keep Layer-0 and tri-state intact.
- Add a desk pack (stories, honest default claims, public sources only).
- Bind map pins only with public lat/ing; no private homes.
- Optional mesh families for illustrative sketches — claim-linked.
- Run npm test, lint, build, and smoke.
- Document maturity (stable / beta / lab) for anything unfinished.

Detail: docs/FORKING_A_TOPIC_PACK.md · docs/OPEN_DEVELOPMENT.md.

7. Experimental channel and honesty

This release is explicitly **EXPERIMENTAL**. UI will change. Assistive autonomy (claim miner, contradiction scan, SME top-3) is planned, not fully shipped. In-product amber badge, Share disclaimer, Guide status, and README callout prevent finished-product misread.

See docs/EXPERIMENTAL_STATUS.md.

8. OPSEC and local machine safety

Public tree excludes secrets, path-bound maintainer handoffs, dogfood screenshots, and release zips. Install scripts only run local npm install/build and bind Vite to 127.0.0.1. No admin elevation, no credential harvest, no destructive system scripts.

docs/OPSEC_PUBLIC_RELEASE.md · docs/LOCAL_MACHINE_SAFETY.md · docs/PII_AND_AGNOSTIC_POLICY.md.

9. 3D refinement path

Geometry remains illustrative. Scale-accurate map features use public basemaps and meter footprints. Auto-scale eases zoom for inspection. Full-scene status rims and Solo claim panel remain backlog. Contract:

docs/3D_ILLUSTRATIVE_CONTRACT.md.

10. Roadmap (post-publish)

- Wire map layer toggles to pin visibility
- SME top-3 recommender (confirm-apply)
- Claim miner (propose at score 0 only)
- Contradiction assistant to proposed –1
- Mobile chrome diet / Solo-map default preference
- Optional Deep-run multi-agent behind explicit button

11. Quality gates

npm test && npm run lint && npm run build && node scripts/smoke-sme-congress.mjs

v2.0.0-experimental verified prior to publish: unit tests green · 0 lint · production build · smoke OK.

12. Spine

Noise arrives → you score claims → you demand sources → you map without fake forensics → you share only what survives → narratives get smashed; supported truth gets projected — tools raise human agency; they do not replace judgment.
